Genus *Thermonerobacter*

Etymology
[Ther.mo.ne.ro.bac'ter] **Gr. masc. adj.** *thermos*, hot; **Gr. neut. n.** *nero*, water; **N.L. masc. n.** *bacter*, rod; **N.L. masc. n.** *Thermonerobacter*, a rod from hot water

Nomenclatural type
Species *Thermonerobacter thiotrophicus*[Ts]

Description
Thiel et al., 2019: "a member of the Bacteroidetes/Chlorobi group from MS microbial mats with dissimilatory sulfur metabolism, and predicted sulfate-reducing directionality"

Classification
Bacteria » *incertae sedis* » *Thermonerobacter*
