# Species Cohnella colombiensis

#### Etymology

[co.lom.bi.en'sis] N.L. fem. adj. colombiensis, belonging to Colombia

#### Nomenclatural type

INSDC Nucleotide: CP119317.1 Ts

#### Description

The species is established on the basis of MiGA taxonomic novelty analysis, the taxonmic placement using maximum likelihood trees with 120 bacterial marker genes (bac120) and and the type material is the genome MAG\_2441. Genomic metrics include ANI (67.06), AAI (67.21) and dDDH d4 (30.4). The MAG was reconstructed from lignocellulolytic bacterial consortium and encoded for 149 CAZymes, 44 of them involved in lignocellulose degradation. In addition, putative genes for PET and PUR hydrolisis were found within the MAG.

#### Classification

Bacteria » Bacillota » Bacilli » Caryophanales » Paenibacillaceae » Cohnella » Cohnella colombiensis
