

Genus *Atabeyarchaeum*

Etymology

[A.ta.be.y.ar.chae'um] **N.L. fem. n.** *Atabey*, the Mother Goddess in Taíno mythology; **N.L. neut. n.** *archaeum*, ancient, an archaeon from Gr. adj. *archaios*; **N.L. neut. n.** *Atabeyarchaeum*, named for Atabey, the Mother Goddess in Taíno Puerto Rican mythology

Nomenclatural type

Species *Atabeyarchaeum deiterrae*^{Ts}

Description

ased on protein content and compositional features, we infer that Atabeyarchaeia is a non-methanogenic acetogenic chemoheterotroph, with potential to grow lithoautotrophically by using H₂ as an electron donor. Phylogenetic analyses using several sets of marker genes placed two complete genomes in a monophyletic group within the Asgard clade as a sister group to Freyarchaeia. We performed phylogenetic analyses using concatenated marker sets of 47 archaeal clusters of orthologous genes (arCOGs) and 15 ribosomal protein (RP15) gene cluster, as well as the 16S rRNA gene. The new genomes share only 40–45% AAI when compared to other Asgard genomes, consistent with their assignment to a new phylum. Although our analyses provide evidence for distinction at the phylum level, we chose to adhere to the Genome Taxonomy Database (GTDB) for standardized microbial genome nomenclature. We establish a robust classification and propose *Atabeyarchaeum* as the type genus for the family Atabeyarchaeaceae, the order Atabeyarchaeales, the class Atabeyarchaeia with the Asgardarchaeota phylum.

Classification

Archaea » *Asgardarchaeota* » *Atabeyarchaeia* » *Atabeyarchaeales* » *Atabeyarchaeaceae* » *Atabeyarchaeum*
