

Species *Elusimicrobium euhamitermitis*

Etymology

[eu.ha.mi.ter'mi.tis] **N.L. gen. n.** *euhamitermitis*, of Euhamitermes, referring to the termite host genus.

Nomenclatural type

[NCBI Assembly: GCA_031254225.1](#) ^{Ts}

Description

The species comprises only metagenome-assembled genomes. The species includes all bacteria with more than 95% average nucleotide identity (ANI) to the type genome. The GC content of the type genome is 47.5% and the estimated genome size is 1.5 Mbp.

Classification

Bacteria » *Elusimicrobiota* » *Elusimicrobia* » *Elusimicrobiales* » *Elusimicrobiaceae* » *Elusimicrobium* » *Elusimicrobium euhamitermitis*
