
Species *Pseudodesulfovibrio salinus*

Etymology

[sa.li'nus] **L. masc. adj.** *salinus*, of salt, referring to this taxon's recovery from the sea

Nomenclatural type

[INSDC Nucleotide: CP182342](#) ^{Ts}

Description

The species is established on the basis of MiGA taxonomic novelty analysis, and the type material is the genome CP182342

Classification

Bacteria » *Desulfobacterota* » *Desulfovibrionia* » *Desulfovibrionales* » *Desulfovibrionaceae* » *Pseudodesulfovibrio* » *Pseudodesulfovibrio salinus*
