

Electrothrix gigas sp. nov.

Submitted by Schramm, Andreas

Species *Electrothrix gigas*

Etymology

[gi'gas] N.L. masc. n. *gigas*, a giant (nominative in apposition), referring to its very large cell diameter

Nomenclatural type

[NCBI Assembly: GCA_022766165.1](https://ncbi.nlm.nih.gov/assembly/GCA_022766165.1) ^{TS}

Reference Strain

AU1_5 (TS)

Description

Filamentous bacteria of centimeter length that inhabit the surface of marine and coastal sediment and conduct electrons from sulfide-oxidizing cells to oxygen-reducing cells. Cell diameters >2.5 µm (commonly 2.5-8 µm). Gliding motility. Gram-negative, with distinct ridges running longitudinally along the filament. Can assimilate acetate and propionate; CO₂ fixation via the Wood-Ljungdahl pathway. Contains c-type cytochromes and type IV pili (PilA). Polyphosphate and polyglucose storage. Distinguishable by size, 16S rRNA gene sequence and genome.

Classification

Bacteria » *Desulfobacterota* » *Desulfobulbia* » *Desulfobales* » *Desulfobulbaceae* » *Electrothrix* » *Electrothrix gigas*
