

## Species *Mangrovimarina plasticivorans*<sup>Ts</sup>

### Etymology

[plas.ti.ci.vo'rans] N.L. neut. n. *plasticum*, plastic; L. pres. part. *vorans*, devouring, destroying; N.L. part. adj. *plasticivorans*, plastic-devouring referring to ability of organism to catabolize the plastic

### Nomenclatural type

[NCBI Assembly: GCA\\_963966365.1](#)<sup>Ts</sup>

### Description

A species established on the basis of MiGA taxonomic novelty analyses, ANI, AAI, phylogenomic tree, and the type material is the genome MAG11A\_P8. The MAG was reconstructed from PET-transforming bacterial consortium and encoded for two putative monohydroxyethyl terephthalate hydrolases. In addition, genes involved in PET-monomers catabolism were found within the genome.

### Classification

Bacteria » Pseudomonadota » Alphaproteobacteria » Hyphomicrobiales » Rhizobiaceae » *Mangrovimarina* » *Mangrovimarina plasticivorans*<sup>Ts</sup>
